

We conducted a trial using Evofactor on kale. We were able to grow plants of equal quality with half the fertilizer, and we actually exceeded wet weights, dry weights, and macronutrient assimilation.

– David Coorts, Technical Director of Verano365

A proprietary nutrient adjuvant used to promote nutrient availability to plants when applied with nutrient mixtures delivered as part of a regular fertigation schedule.

NUTRIENT ASSIMILATION

Compared to the control group, Evofactor with half-rates of fertilizer increased uptake of applied nutrients:
